GOPI KRISHNAN S
s.gopikrishnan1992@gmail.com
Kanyakumari, India

Technical Skills

Programming/Scripting: C#, SQL, VB.NET, Javascript

Framework: .NET 10, .NET Framework,, Web API, ReactJS, ASP.NET Webforms, ADO.NET, Entity Framework CF, WCF, Bootstrap

Cloud: Azure – Web Apps, SQL Server, Azure Functions, Azure Service Bus, WebJobs, Blob Storage, Azure DevOps; Firebase – OTP Authentication, Web Hosting, Notification; GCP - VMs

Tools/Application: Visual studio, VS Code, SQL Server Management Studio (SSMS), GIT, Bitbucket, Jenkins, Docker, Automic (UC4), Agile, Confluence, Splunk, Stripe

Experience

Project #1:

Title: Ascendion
Environment: Web API, Entity framework, WCF, C#, SQL, ReactJS; GCP – VM, service accounts, Docker containers; DevOps – Jenkins, Bitbucket, Jira, confluence, Splunk, UC4, ML.NET
Duration: June 2023 - Present
Role: Senior Software Engineer
Team size: 24
Client: CME Group
Responsibilities:

- Key role in migration of entire on-prem server applications to GCP with quick turnaround for all the dotnet applications
- Automated the entire trading related financial data activities using Automatic UC4 automation tool which involves console application, SQL jobs, file event and file transfer jobs
- Achieved around 20% of cost cutting by GCP server cost optimization process, which dropped our quarterly billings from 520K USD to 416K USD
- Maintenance and enhancement made to ReactJS projects
- Entire deployment process has been automated by CI/CD pipeline using Jenkins, Bitbucket from traditional code push method
- Migrated the legacy company specific library function for identity verification to modernized WCF security services
- Legacy tightly coupled thick client applications integrated with Splunk for monitoring.
- Acted as a scrum master for GCP migration pod and achieved Agile using JIRA
- Effective communicator and documented the entire business specification in confluence
- Production support, root cause analysis at quick turnaround time

Project #2:

Title: Club Operations Private Limited
Environment: ASP.NET WebForms, Web API, Entity framework, C#, SQL, VB.NET, jQuery; Azure – Web Apps, WebJobs,

Functions, Azure Service Bus, Blobs, DevOps, GIT; Firebase - Notification

Duration: July 2017 – June 2023
Role: Senior Software Engineer
Team size: 6
Client: Australian Sailing Clubs
Responsibilities:

- Developed full stack responsive ASP.NET web-forms application product using C# and Entity framework for managing 300+ sailing clubs across Australia and New Zealand
- Designed and Integrated online payment gateway Stripe to the ticket booking systems which crossed the payment collection of 1.5 million AUD without any downtime
- Authentication and role based authorization using ASP.NET Identity framework/database
- Developed Web API for iOS and Android applications by Web API versioning for backward compatibility
- Wrote Azure Web jobs from the scratch and deployed in Azure Web Apps to trigger a daily job in Australian time including day light savings to notify users by email, firebase notification and Azure Service Bus
- Worked in Azure functions to divide the uploaded image stream to multiple images
- Migrated the complete Web Apps and database from various third-party vendors to Azure Web App, BLOB and MS SQL database services
- Trouble shoot and solved numerous priority issues including Azure server down without affecting the clients.

Project #3:

Title: Cognizant Technology Solutions, India
Environment: ASP.NET WebForms, C#, SQL, Entity framework, HTML, CSS, Bootstrap, TFS, Unit testing
Duration: Oct 2014 – July 2017
Role: Programmer Analyst
Team size: 10
Client: Cognizant Internal
Responsibilities:

- Automated bulk CSV file data upload ranging from few to several hundred megabytes using .NET console application and C#
- Calculated entire cognizant work force utilization and made available to human resource for their processing using ASP.NET WinForms
- Tuned SQL queries and stored procedures reducing the latency rate by 45%
- Created and deployed web application using SOA architecture by ASP.NET WebForms
- Developed and designed batch jobs for data porting with overall data size more than 2 GB/day
- Worked in L3 support team for quick turn-around resolution, bug fix, and query performance tuning
- Created and tested windows application for online mobile recharge system
- Performed various roles in project requirement gathering, documentation and unit testing

Education

Anna University, Ponjesly College of Engineering **2010 – 2014**
Bachelor of Engineering, Electronics and Communication
